In-State Broadcast Programming)

To: The Commission

COMMENTS OF THE NATIONAL ASSOCIATION OF BROADCASTERS

I. Introduction And Summary

The National Association of Broadcasters (NAB)¹ is pleased to provide comment and data to help the Federal Communications Commission (FCC or Commission) complete its report on in-state broadcast programming.² Section 304 of the Satellite Television Extension and Localism Act of 2010 (STELA) directs the FCC to report to Congress on consumers' access to broadcast signals and in-state broadcast programming, and on whether alternative methods of defining local television markets would provide more consumers with in-state programming. In these comments, NAB shows that consumers today enjoy access to an extraordinarily high level of broadcast service, both over the air and via delivery by multichannel video programming

¹ NAB is a nonprofit trade association that advocates on behalf of local radio and television stations and also broadcast networks before Congress, the Federal Communications Commission and other federal agencies, and the courts.

² See *Public Notice*, "Media Bureau Seeks Comment for Report Required by the Satellite Television Extension and Localism Act on In-State Broadcast Programming," in MB Docket No. 10-238 (rel. Nov. 23, 2010) ("*Public Notice*").

distributors (MVPDs). We also demonstrate that revisions to or abandonment of the current method of defining television markets would not promote consumers' access to broadcast programming, but would in fact imperil the efficient functioning of the local television marketplace to the detriment of local stations, local advertisers and, most importantly, local viewers.³

More specifically, a study and data prepared by BIA/Kelsey show that consumers currently have access to a plethora of in-state and out-of-state broadcast station signals. According to BIA, over-the-air reception by at least one in-state full power television station reaches 3,067 counties (out of a total of 3,141 counties) and 275.2 million people (97.8% of the total 2000 Census population). On a weighted average basis, consumers across all counties nationwide receive over the air 12.2 in-state full-power television stations and 3.8 out-of-state full-power stations. And because significant numbers of television stations are multicasting, consumers today can receive over the air, on a weighted average basis across all counties, 18.8 program streams from commercial in-state full-power television stations and 6.1 program streams from non-commercial in-state stations. With regard to the consumers falling within the 2.2% of the total 2000 Census population lacking over-the-air access to in-state full-power stations, many will obviously have access to such broadcast stations by cable or satellite.

³ Television markets, known as Designated Market Areas or DMAs, are defined by Nielsen Media Research. A DMA is a group of counties served by local television stations licensed to communities within those counties. Section II of these comments provides further detail about the formation of DMAs and their importance in the television marketplace.

On a weighted average basis, 12.3 in-state and 3.9 out-of-state television stations are carried across all cable reporting units.⁴ Almost all (99.99%) of subscribers to these cable reporting units are estimated to be receiving at least one in-state television station. With regard to satellite provision of broadcast stations, 97.8% of Dish Network subscribers can receive at least one in-state television station, while 93.9% of DIRECTV subscribers can receive at least one in-state station. Across all counties on a weighted average basis, Dish Network subscribers receive 9.7 in-state television stations and 1.5 out-of-state stations; DIRECTV subscribers receive 8.9 in-state and 1.5 out-of-state stations.

In evaluating the totality of in-state and other locally-relevant television programming available to consumers today, the Commission also should consider issues beyond the sheer totals of in-state or out-of-state broadcast signals viewers can receive. NAB particularly stresses that MVPDs are permitted to, and in fact do, deliver the local news, weather, public safety and other informational programming of local stations to serve in-state viewers in non-local DMAs. In addition, the web streaming of programming, including news and sports, by local stations is an increasingly common way for consumers to access in-state broadcast programming. And, the examination of cross border DMAs (i.e., those that include counties from more than one state) shows that out-of-state (but in-market) television stations frequently offer extensive locally-oriented service to viewers (such as the locally-oriented programming offered by Washington, DC stations to out-of-state viewers in northern Virginia). Clearly,

⁴ These “units” are local cable systems required by copyright law to file semi-annual statements with the Copyright Office that provide a listing of all broadcast television stations they carried during the reporting period.

programming provided by out-of-state stations can be just as relevant to a local viewer as the programming offered by stations physically located in the same state as the viewer.

Based on the data and analysis provided by BIA/Kelsey and discussed in our comments, it would appear wholly unnecessary to alter how television markets are defined so as to ensure that consumers have access to in-state broadcast stations and programming. Any effort to redefine local television markets would also be fraught with significant practical difficulties. The current method of defining local television markets is based on marketplace realities, especially the present viewing patterns of local consumers, and counties are assigned to markets based on these actual viewing patterns (and reassigned as viewing habits change). Thus, revisions to the present method of defining local television markets inevitably would move away from current assessments of consumers' real-world preferences – and likely toward a method of defining markets less grounded in evidence from the television marketplace. Indeed, all three proposals for redefining markets set forth in the *Public Notice* shift from factors grounded in the marketplace and toward the use of static state boundaries as the only or primary factor in defining markets. Adoption of any of these alternatives would result in less rational and less useful markets, ones essentially untethered to viewing and population patterns and the economics of the television marketplace.

Looking at the *Public Notice's* proposals for redefining markets in more detail, it is clear that reassignment of counties to different markets (which would be necessary under all of the proposals) could easily result in many viewers receiving service from more geographically distant television stations with lesser connections to those viewers.

Viewers are unlikely to receive more locally responsive service from stations that are significantly geographically more distant. As explained in detail in our comments, redefining markets has the real potential to disrupt television advertising markets, long-standing and important program exclusivity arrangements, the carriage obligations of cable and satellite operators, and local television station ownership structures.

As shown below and in the attached study and data, there is no need to take actions that will severely disrupt the local television marketplace and ultimately harm consumers. NAB thus urges the Commission to report to Congress on the high levels of in-state and out-of-state broadcast stations and programming available to consumers and on the need to avoid needless, serious disruption to local television stations and their viewers.

II. Television Markets Are Based On The Viewing Habits And Market-Driven Needs And Wants Of Local Consumers

Television markets are geographical areas in which there is a close and natural nexus between television stations and their service areas; between population centers and their housing, labor, and economic patterns; between advertisers and their potential customers; and between consumers and their television viewing habits. Television markets, as defined by Nielsen Media Research's (Nielsen) DMAs, represent the closest nexus between television viewers' actual viewing habits, statistically significant and relevant aggregations of people, and the service coverage of television stations as determined by the laws of physics for their location and transmission facilities. Viewer preferences for television programming, consumer preferences for housing and employment, and even station preferences for facility location and equipment all change dynamically over time. The current DMA system is designed to reflect and account for

these changes. Imposing artificial constructs on television markets would disrupt one or more elements of how such markets are defined and function and ultimately would harm the ability of local television stations to serve their local viewers.

A. DMAs Reflect Actual Viewing Patterns and Change as Those Viewing Patterns Evolve

Of all the factors that go into defining a television market, most importantly Nielsen assigns virtually every county⁵ and each television station in the United States to a DMA based on the *actual station viewing preferences* of the population in that county. Each DMA is made up of counties in which the preponderance of total viewing can be attributed to specific stations.⁶ In other words, counties are assigned to markets based on the local stations the people in those counties actually view.⁷ Viewers, themselves, essentially select their DMAs based on their own choices—Nielsen simply measures these viewing choices and makes market assignments accordingly.

DMAs are not static. They change as market conditions and viewer preferences evolve. Nielsen analyzes these viewer preferences each year and makes changes as warranted by actual viewing data—for example, by moving a particular county from one DMA to an adjacent DMA.⁸ Additionally, a station may petition Nielsen to change its “Market-Of-Origin” assignment if both its transmitter and the majority of its noise-limited

⁵ There are 13 very remote Alaska counties not included in any of the 210 DMAs.

⁶ See JAMES G. WEBSTER, PATRICIA F. PHALEN, LAWRENCE W. LICHTY, RATINGS AND ANALYSIS: THE THEORY AND PRACTICE OF AUDIENCE RESEARCH 132 (2d ed. 2000) (hereinafter, “RATINGS AND ANALYSIS”).

⁷ See RATINGS AND ANALYSIS 132.

⁸ See Norman Hecht Research, Inc., Designated Market Areas: How They Relate to Viewers and a Vital Local Television Marketplace (Sept. 2009) (hereinafter “NHR White Paper,” Attachment B hereto), at 2; RATINGS AND ANALYSIS 132-34.

service contour are located in a different DMA than the DMA in which the station's community of license is located.⁹ Nielsen reserves the right to consider whether the change sought reflects the reality of the market affected.¹⁰

Similarly, the Commission also has a well-established mechanism for making changes to the markets of particular stations, on a case-by-case basis, pursuant to the market modification mechanism set forth in Section 76.59 of the Commission's rules.¹¹

To make a change from one market to another, a station must present the Commission with particularized evidence of the station's commonality with the specific market to which the station wishes to be assigned—for example, data on shopping and labor patterns in the local market, audience viewing data, and advertising and sales data.¹²

The critical determination in a market modification proceeding before the Commission—as with a market change petition to Nielsen—is to reflect actual conditions in the marketplace and make corrections to market designations, where warranted.¹³ In sum, if

⁹ See *Definition of Markets for Purposes of the Cable Television Broadcast Signal Carriage Rules*, Order on Reconsideration and Second Report and Order, 14 FCC Rcd 8366, 8371 (1999). A petition to change a station's Market-Of-Origin must include relevant information on which the petitioning station bases its request for a change in Market-Of-Origin, including community of license, transmitter location, signal coverage (including FCC coverage maps), audience data from previous measurements, and/or competitive considerations. See *id.*

viewers change their television viewing preferences in a statistically significant way, mechanisms and processes exist to ensure such changes are reflected in FCC market modification decisions and in Nielsen's DMA designations.

B. DMAs Are Based on Population Centers Defined by the U.S. Government

The foundation of the Nielsen DMA system is the Metropolitan (or Micropolitan) Statistical Area (MSA), which is a geographical area defined by the U.S. Office of Management and Budget (OMB).¹⁴ Each MSA consists of one or more counties and contains the relevant core urban area and any adjacent counties that have a “high degree of social and economic integration (as measured by commuting to work)” with the urban core.¹⁵ That is, an MSA is a geographical area containing a “substantial population nucleus, together with adjacent communities that have a high degree of economic and social integration with that core.”¹⁶

Critically, OMB's Metropolitan (or Micropolitan) Statistical Areas are not bound by state lines—and, for that reason, neither are Nielsen DMAs. Population centers near state lines inevitably draw people who live in communities from adjacent states to the

Consumer Protection and Competition Act of 1992 Broadcast Signal Carriage Issues, Report and Order, 8 FCC Rcd 2965, 2976 (1993) (“Section 614(h)(1)(C) of the 1992 Cable Act permits the Commission to add communities to or subtract communities from a station's television market to better reflect marketplace conditions. . . .”).

¹⁴ See NHR White Paper, at 1; see also RATINGS AND ANALYSIS 134.

¹⁵ See U.S. Census Bureau, Metropolitan and Micropolitan Statistical Areas, *available at* <<http://www.census.gov/population/www/metroareas/metroarea.html>> (last visited Jan. 13, 2011). A metro area contains a core urban area of 50,000 or more population, and a micro area contains an urban core of at least 10,000 (but less than 50,000) population. See *id.*

¹⁶ NHR White Paper, at 1-2.

urban core by offering employment, shopping, and entertainment opportunities. MSAs sometimes cross state lines in order to accurately reflect socially and economically integrated populations. The same is, of course, true for DMAs.¹⁷

For example, the New York-White Plains-Wayne, NY-NJ Metropolitan Statistical Area consists of Bergen, Hudson, and Passaic Counties in New Jersey, and Bronx, Kings, New York, Putnam, Queens, Richmond, Rockland, and Westchester Counties in New York.¹⁸ The MSA crosses state lines because OMB has determined that the citizens of the designated New Jersey and New York counties surrounding the urban core, New York City, show a high degree of social and economic integration with each other. Likewise, Nielsen groups these counties (and others) into the New York DMA. In fact, the Commission itself recognizes the interstate commonality among the population in the metro-New York City area—market number one in the FCC's Top 100 television market list is designated as New York, New York-Linden (New Jersey)-Paterson (New Jersey)-Newark, New Jersey.¹⁹ Thus, the Commission, OMB, and Nielsen all agree that the New York City market area is not bound by state lines because that is simply not the way the population lives and works. Commuters from Passaic County, New Jersey, want and need local news, weather, traffic, and emergency information from New York

¹⁷ See, e.g., RATINGS AND ANALYSIS 134 (discussing the Denver DMA, which is comprised of counties in Colorado, Wyoming, and Nebraska because Denver stations account for a large share of television viewing in those counties).

¹⁸ See U.S. Census Bureau, Metropolitan and Micropolitan Statistical Areas and Components, December 2009, *available at* <<http://www.census.gov/population/www/metroareas/lists/2009/List1.txt>> (last visited Jan. 13, 2011).

¹⁹ See 47 C.F.R. § 76.51(a). Indeed, at least ten of the top 100 markets listed in this section include hyphenated markets with communities in different states.

City television stations.

While the MSA is a significant factor in setting DMA boundaries, it is not the only factor. DMAs also account for the physics of broadcasting and the technical reach of television signals.²⁰ Thus, while there are nearly one thousand total MSAs today, there are only 210 DMAs, so DMAs are generally a combination of more than one MSA.²¹ MSA boundaries, like state boundaries, do not necessarily reflect technical signal coverage areas. In addition, in some cases DMAs include adjacent or non-MSA counties. In such instances, Nielsen determines which adjacent counties to include in the DMA based on the television viewing preferences—i.e., based on actual viewing habits and practices—of the consumers residing in those counties.²²

C. Television Markets Are Also a Function of Technical Coverage

The basic foundation of broadcast television is its point-to-multipoint communications technology. The nature of broadcasting is to provide a programming service to as many people as possible as efficiently as possible from a single transmission location. Therefore, as a practical matter, many television stations and the towers they use to transmit their signals are located in population centers in order to reach as large a population as possible.

The physics of television broadcasting necessarily determines the geographical

²⁰ See RATINGS AND ANALYSIS 22.

²¹ As of June 6, 2003, there were 362 Metropolitan Statistical Areas and 560 Micropolitan Statistical Areas in the United States. See U.S. Census Bureau, Metropolitan Statistical Areas Micropolitan Statistical Areas, *available at* <<http://www.census.gov/population/www/metroareas/aboutmetro.html>> (last visited Jan. 14, 2011).

²² See NHR White Paper, at 2.

limits of over-the-air signals and, therefore, influences the boundaries of a station's market.²³ Over-the-air viewers, in particular, naturally watch the signals of stations that are closest to them because they can receive these signals²⁴—signals that, by their nature, do not stop at state borders. Thus, as a technical matter, television viewing patterns are a function of and are influenced by the reach of a station's signal.

The Commission recognizes the close association between a television station's signal coverage area and marketplace realities. For example, Grade B, now noise-limited service contour, coverage is a critical factor in the Commission's own market modification rules and policies. In considering proposals to add or remove a station from a particular DMA for purposes of cable carriage (discussed below), the Commission expressly requires evidence of "Grade B contour maps delineating the station's technical service area."²⁵ The Commission's policy in this regard relates to the statutory requirement that the Commission examine factors including "whether the television station provides coverage or other local service to such community."²⁶

²³ See RATINGS AND ANALYSIS 22-23.

²⁴ See RATINGS AND ANALYSIS 23.

²⁵ See 47 C.F.R. § 76.59(b)(2). Rule 76.59(b)(2) at this time still speaks in terms of analog Grade B contour maps, but, post-digital transition, the equivalent of the analog Grade B service contour is the noise-limited service contour. See *Tennessee Broadcasting Partners, Petition for Modification of the Television Market for WBBJ-TV, Jackson, Tennessee*, 25 FCC Rcd 4857, n.14 (MB 2010) (citing *Report to Congress: The Satellite Home Viewer Extension and Reauthorization Act of 2004; Study of Digital Television Field Strength Standards and Testing Procedures*, 20 FCC Rcd 19504, 19507, 19554 (2005)).

²⁶ See 47 U.S.C. § 534(h)(1)(C)(ii)(II). See also *Armstrong Utilities, Inc., Petition for Modification of the Philadelphia, Pennsylvania DMA*, Memorandum Opinion and Order, 21 FCC Rcd 13475, 13484-85 (MB 2006) ("In all of the above decisions, the Bureau denied the petitioners' requests where WFMZ-TV's Grade B contour, or its expanded

In sum, there are technical, as well as social, economic and statistical, reasons for DMAs to be drawn in the manner in which they are.

D. Congress and the Commission Have Recognized DMAs as the Best Method for Determining Viewer Preference

Since 1992, Congress and the Commission have relied upon commercial market assignments as the backbone of several rules, most notably for mandatory cable carriage of television signals. Congress established the framework for the current cable must-carry regime in the Cable Television Consumer Protection and Competition Act of 1992.²⁷ The 1992 Cable Act, which amended the Communications Act, established that a television station's must-carry rights on a particular cable system are generally determined based on the station's (and the cable system's) local market.²⁸

Grade B contour, encompassed at least a portion of the system communities while the remaining system communities fell just outside the Grade B contour. Because of this demonstrable coverage, WFMZ-TV's lack of historic carriage and its marginal local programming were given less emphasis.”).

²⁷ Cable Television Consumer Protection and Competition Act of 1992, Pub. L. No. 102-385 (hereinafter, “1992 Cable Act”).

²⁸ See 1992 Cable Act, §§ 614(a); 614(h)(1)(A). To implement the 1992 Cable Act, the Commission initially relied not on Nielsen DMAs to determine local television markets, but instead used Arbitron Areas of Dominant Influence (“ADIs”). As enacted, Section 614(h)(1)(C) of the 1992 Cable Act specified that a station's market “shall be determined in the manner provided in Section 73.3555(d)(3)(i) of the Commission's rules.” (Section 73.3555(d)(3)(i) of the FCC's rules, now redesignated as Section 73.3555(e)(2)(i), is a separate rule related to station ownership issues that, at one time, referred to Arbitron ADIs, but now refers to Nielsen DMAs.) However, after enactment of the 1992 Cable Act, Arbitron ceased its television research business, prompting the Commission, in 1995, to launch a proceeding to redefine market areas for the purpose of mandatory carriage of television signals. See *Definition of Markets for Purposes of the Cable Television Mandatory Television Broadcast Signal Carriage Rules*, Report and Order and Further Notice of Proposed Rulemaking, 11 FCC Rcd 6201, 6206 (1996).

With enactment of the Telecommunications Act of 1996,²⁹ Congress required that “local market” be determined for purposes of applying the mandatory carriage provisions “by the Commission by regulation or order using, where available, commercial publications which delineate television markets based on *viewing patterns . . .*”³⁰ That is, Congress specifically directed the Commission to define television markets for cable carriage using a commercial service that sets market boundaries based on viewing preferences.

In adopting the Nielsen DMA as the appropriate determinant of local television markets, the Commission stated:

Nielsen’s DMA market assignments provide the most accurate method for determining the areas served by local stations. We recognize the benefits of switching to a market definition based on DMAs. DMAs have become *the television market standard* for commercial purposes in the absence of any alternative. *They represent the actual market areas in which broadcasters acquire programming and sell advertising . . .* Moreover, in general, we continue to believe that our 1993 decision to use updated market designations for each election cycle to account for *changing markets* is appropriate. Nielsen provides the only generally recognized source for information on television markets that would permit us to retain this policy. *Thus, we conclude that the DMA market designations will provide the best method of “delineat[ing] television markets based on viewing patter[n]s” over the long term.*³¹

²⁹ Telecommunications Act of 1996, Pub. L. No. 104-104 (hereinafter, “1996 Act”).

³⁰ 1996 Act, § 301; *see also Definition of Markets for Purposes of the Cable Television Mandatory Television Broadcast Signal Carriage Rules*, Report and Order and Further Notice of Proposed Rulemaking, 11 FCC Rcd 6201, 6206 (1996) (emphasis added).

³¹ *Definition of Markets for Purposes of the Cable Television Mandatory Television Broadcast Signal Carriage Rules*, Report and Order and Further Notice of Proposed Rulemaking, 11 FCC Rcd 6201, 6220 (1996) (emphases added) (internal citations omitted).

The ongoing concern for incorporating actual viewing patterns in the mandatory carriage rules, rather than relying on a static geographical determination, supports the notion that DMAs are dynamic and subject to change based on the needs and wants of viewers.

III. Section 304 Of STELA Requires That The Commission Analyze Access To Both Broadcast Signals And In-State Broadcast Programming

The context provided above is important to understand how the Commission must structure the report required by Section 304(1) & (2) of the STELA.³² This report is to analyze how many consumers receive out-of-state broadcast signals, and the “extent to which” consumers have access to in-state broadcast programming, either over the air or via a multichannel video provider. *Public Notice* at 1. Significantly, there is an essential difference between these two requirements, the first focusing on receipt of *signals* and the second on access to *programming*. The difference in language is critically important to the Commission’s approach in this proceeding.

While the reach of stations’ signals (whether in-state or out-of-state) can be determined by analyzing the predicted coverage areas of the nation’s television stations, evaluating the level of consumers’ access to “in-state” programming requires a more nuanced approach. As discussed in detail below, access to in-state (or, more relevantly, locally-oriented) programming is not limited by consumers’ access to the signals of television stations located in their home states. Stations in cross-border DMAs provide programming, including news and information, that serves all viewers

³² See Satellite Television Extension and Localism Act of 2010, Title V of the “American Workers, State, and Business Relief Act of 2010,” Pub. L. 111-175, 124 Stat. 1218 (2010).

within their markets, not just those consumers whose households lie within the state where the station may physically be located.

To provide the Commission with as much information as possible for its analysis and report, attached to our comments is a study conducted by BIA/Kelsey.³³ This study provides detailed information about the over-the-air reach of full-power broadcast stations on both a county and DMA level; the numbers of in-state and out-of-state full-power stations available to consumers via over-the-air transmission, on both a county and DMA basis;³⁴ the numbers of in-state and out-of-state stations carried across all cable reporting units and television markets; the percentages of cable and satellite subscribers who can receive at least one in-state television station; and the numbers of in-state and out-of-state stations received by subscribers of the two national satellite providers, on a county and television market basis. See BIA Study & Appendices 1-6.

We believe this data will enable the Commission to respond to Congress's request for information, and to apparent concerns, about viewers who receive signals from out-of-state stations and the extent to which consumers have access to in-state broadcast programming. In particular, the extensive data provided about the provision of in-state signals to the public will assist the Commission in framing its discussion about the number of viewers receiving out-of-state signals, given that many consumers receive both in-state and out-of-state stations (and the fact that viewers may receive

³³ See Attachment A, *Analysis of In-State and Out-of-State Reach by Local Television Stations*, Mark R. Fratrik, Ph.D., BIA/Kelsey, January 24, 2011 ("BIA Study" or "Attachment A").

³⁴ As suggested in the *Public Notice* (at 2), BIA applied the Longley-Rice methodology for estimating television stations' coverage patterns. BIA Study at 4.

out-of-state stations does not mean they do not also receive in-state stations).³⁵ Taken as a whole, the attached study and appendices show extraordinarily high levels of broadcast television service to the American public, from both in-state and out-of-state stations transmitted over the air and delivered by cable and satellite.

A. Data Show that Viewers Have Access to a Plethora of In-State and Out-of-State Signals

The BIA Study and attached data show that the current over-the-air television distribution structure provides remarkably comprehensive in-state coverage, assuaging any concerns that any significant portion of the population lacks access to in-state broadcast stations and that the current DMA system needs revision to ensure viewer access to in-state signals or programming.

According to the BIA Study, over-the-air reception by at least one in-state full power television station reaches 3,067 counties (out of a total of 3,141 counties) and 275.2 million people (97.8% of the total 2000 Census population). *Id.* at 6-7 & Appendix 1. BIA is continuing to analyze the extensive data relating to the in-state reach of television translators, Class A stations and low-power stations. This data is expected to demonstrate that over-the-air television stations, taken as a whole, reach even greater

³⁵ Indeed, appendices 1 and 2 demonstrate that the vast majority of consumers that have access to signals from stations from a different state also have access to one or more in-state broadcast stations, both on a county and television market level. For example, viewers in Crittenden County, Arkansas, a county on the eastern edge of the state bordering Tennessee and located within the Memphis DMA, can receive, on average, the signals of three Arkansas stations over the air (in addition to receiving over the air more than 10 out-of-state stations). See BIA Study, Appendix 1. Similarly, in Clinton County, Illinois, located in the St. Louis DMA, viewers have access on average to five Illinois stations over the air (in addition to receiving over the air more than eight out-of-state stations). *Id.*

numbers of viewers than those reached by full-power stations alone.³⁶ We also note that many of the consumers falling within this 2.2% of the total 2000 Census population lacking over-the-air access to at least one in-state full-power station will have access to in-state stations by cable or satellite.

On a weighted average basis, consumers across all counties nationwide receive over the air 12.2 in-state full-power television stations and 3.8 out-of-state full-power television stations. *Id.* at 7. In the average television market, 96.1% of the local market's population can receive at least one in-state full-power station over the air. *Id.* at 8 & Appendix 2. There are 72 television markets where 100% of the market population can receive at least one in-state television station over the air. *Id.* Moreover, there are 67 markets where the weighted average number of in-state full-power television stations received over the air exceeds 10 stations (with 152 markets receiving more than five in-state stations and 187 markets receiving more than three in-state stations over the air). *Id.* at 8-9 & Appendix 2.

Cable and satellite carriage of in-state broadcast stations enhances this already-impressive level of access. On a weighted average basis, 12.3 in-state and 3.9 out-of-state television stations are carried across all cable reporting units.³⁷ Almost all

³⁶ We will provide this data in our reply comments.

³⁷ As part of the requirements for the cable compulsory license, local cable systems must file semi-annual Statements of Account with the Copyright Office that provide a listing of all television stations they carried. This listing of carried stations includes all the television stations located within the cable system's own television market, as well as the out-of-market television stations being carried. There were 3,721 cable reporting units that reported to the Copyright Office for the first report period (January – July) of 2009. Commonly owned cable systems that serve contiguous communities using a single headend file as a single reporting unit. The television stations being carried

(99.99%) of subscribers to these cable reporting units are estimated to be receiving at least one in-state television station. *Id.* at 11 & Appendix 3. Across all DMAs, the weighted averages of the number of in-state and out-of-state television stations provided via local cable systems are 12.3 and 3.4, respectively. *Id.* at 12 & Appendix 4.

Across all counties, between 94-98% of the subscribers to the two national satellite television providers can receive at least one in-state television station.³⁸ Across all counties on a weighted average basis, Dish Network subscribers receive 9.7 in-state television stations and 1.5 out-of-state stations; DIRECTV subscribers receive 8.9 in-state and 1.5 out-of-state stations. *Id.* at 15 & Appendix 5. Across all television markets, DIRECTV, on average, provides 5.25 in-state and .88 out-of-state television stations, with Dish Network providing, on average, 6.62 in-state and 1.12 out-of-state stations. *Id.* at 15-16 & Appendix 6.

Overall, these data show impressive numbers of broadcast stations accessible to consumers over the air and via cable and satellite. The Commission's report should accordingly reflect this ability of consumers to receive easily the signals of numerous broadcast stations, including a plethora of both in-state and out-of-state signals.

include full-power stations as well as some Class A television and low-power television stations. BIA Study at 9-10.

³⁸ For Dish Network, 97.8% of all their subscribers can receive at least one in-state television station. For DIRECTV, 93.9% of all their subscribers can receive at least one in-state station. While most of the television stations carried by both satellite companies are full-power television stations, some are Class A and low-power television stations. BIA Study at 15 & Appendix 5.

B. Stations in Cross-Border Markets Regularly Provide Programming, Including News and Information, That Serves Consumers Throughout Their Viewing Area

Beyond analyzing data demonstrating the sheer number of station signals available to viewers, the Commission must also, under Section 304(2), report on the “extent to which” consumers have access to in-state broadcast *programming*, either over the air or via a multichannel video provider. With regard to the FCC’s specific questions about measuring the “extent” of access to in-state programming, *Public Notice* at 4, it is not useful for the Commission to compile data on the percentage of in-state stations a consumer can access. As the Commission notes, “the difference in geographic size among the states” would produce widely disparate and misleading results. *Id.* Residents of San Diego, CA, for example, probably receive less than a third of all California-based broadcast stations; yet it is clear that consumers in the San Diego market are receiving multiple in-state stations and a plethora of locally relevant programming, including news, sports, traffic, weather and emergency information.

We agree that determining which consumers have access to in-state broadcast *stations* is an appropriate place to start in analyzing consumers’ access to in-state *programming*.³⁹ We also agree that the term “access,” for purposes of this report, should include consumers that could obtain access to the in-state broadcast stations

³⁹ As requested in the *Public Notice* (at 3-4), the attached BIA Study (at 6-9) includes such data broken down both by county and DMA. See *id.* at Appendices 1 & 2 (data on over-the-air reach of full-power stations).

carried via MVPDs. See *Public Notice* at 3.⁴⁰ Clearly, MVPDs deliver very significant numbers of in-state stations to millions of viewers.

Indeed, in cross-border markets throughout the country, MVPDs import programming from neighboring DMAs, either because such signals are significantly viewed in that area or because such programming is desired by subscribers and does not duplicate programming already available in the market.⁴¹ To the extent that these MVPDs are carrying stations that provide such in-state and local programming, this programming must be reflected in the Commission's analysis of the accessibility of in-state "programming."

Finally, in evaluating the full extent of "in-state" programming available to consumers, the Commission must recognize that significant programming provided by stations in cross-border DMAs – while technically provided by an out-of-state station – is in fact locally relevant programming, just as the programming provided by stations within a viewer's home state. For example, in the Washington DC (Hagerstown) DMA, many of the major television stations are licensed to the District of Columbia. As anyone living in the Washington DC area can attest, however, those stations routinely air programming that serves the needs and interests of Virginia and Maryland residents.

⁴⁰ As described above, Appendices 3, 4, 5 & 6 of the BIA Study include very detailed information on the numbers of in-state television stations delivered by cable and satellite, on both a county and DMA basis. And beyond the local market broadcast stations that cable systems carry, we further note that cable systems carry significant numbers of out-of-market, but in-state, stations. According to BIA, of the 12,931 "distant" television stations from other markets being carried by local cable system reporting units, more than half (6,983) are in-state television stations. BIA Study at 12.

⁴¹ See *infra*, Section V.B., providing an illustrative list of examples where cable systems have worked with in-state but out-of-market broadcasters to import non-duplicating local content, including news and sports programming, to residents within the same state.

Meteorologists on local ABC-affiliate WJLA, for instance, provide coverage of weather throughout WJLA's viewing area, including the District of Columbia and parts of northern Virginia and Maryland. Stations in Washington DC also routinely provide news, sports and political programming relevant to Virginia and Maryland, despite the fact that those stations are technically licensed out of state.

If the FCC were to consider as "in-state" only the programming offered by stations physically located or licensed in the state where viewers reside, it would lead to the inaccurate conclusion that consumers in cross-border DMAs (such as the suburban areas of Washington DC, including heavily populated areas like Arlington, Alexandria and Fairfax) have little or no access to locally relevant programming. That would be a serious misconception.

In fact, in cross-border markets throughout the country, stations provide programming that serves consumers in multiple states. In the Greenville-Spartanburg-Asheville-Anderson DMA, for example, stations located in Greenville, SC regularly provide news and informational programming that covers viewers throughout their local market, including counties in neighboring North Carolina. In testimony presented before the U.S. Senate Subcommittee on Communications and Technology, Paul A. Karpowicz, President of Meredith Broadcasting Group, stated that Meredith's station, WHNS, in Greenville, SC, routinely "provides locally-attuned service" to the North Carolina communities within its market, "just as it does to the South Carolina communities within its coverage area." Those out-of-state communities within WHNS's market have "close weather, topography, economic, and cultural ties" with Greenville,

SC, and, accordingly, “WHNS airs news stories of specific relevance to these local out-of-state counties.”⁴²

In sum, in properly evaluating viewers’ access to “in-state” programming under Section 304(2) of STELA, the Commission must do more than simply count up the numbers of signals licensed in a particular state that consumers can receive over the air or via cable and satellite. The Commission must also take account of the accessibility of broadcast programming provided by out-of-state (but in-market) stations, particularly in the DMAs that cross state borders, and the provision of in-state programming by stations that license their local programming to multichannel providers for delivery to in-state viewers in non-local DMAs. See *infra* Section V.B.

IV. Wholesale Changes To The Current Television Market Structure Would Severely Damage Local Broadcasting And Undermine Stations’ Ability To Serve Local Viewers

Section 304(3) of STELA requires the Commission to provide an analysis of “alternatives to the use of designated market areas ... to define local markets that would provide more consumers with in-state broadcast programming.” As the Commission acknowledges, redefining local markets to revise or replace DMAs would affect viewers, the advertising market, the number of stations carried by MVPDs in these redefined

⁴² See Testimony of Paul A. Karpowicz, President, Meredith Broadcast Group, Before the Subcommittee on Communications and Technology, Committee on Commerce, Science, and Transportation, U.S. Senate, Oct. 7, 2009. Mr. Karpowicz also noted that the North Carolina counties in the Greenville, SC market are geographically much closer to Greenville, SC than to the nearest North Carolina city of license. Thus, it is more likely that stations located in Greenville would offer more locally relevant service to the residents of those geographically close North Carolina communities. In cross-market DMAs, viewers that are served by out-of-state (but in-market) stations are in fact being served by geographically closer stations, which are more likely to reflect these viewers’ interests and concerns, than more distant in-state (but out-of-market) stations. See BIA Study at 19-20, 24-25.

local markets, and the ownership of broadcast television stations. *Public Notice* at 5.

As demonstrated in the attached BIA Study, and as discussed in detail below, the three specific alternatives set forth in the *Public Notice* for redefining television markets would all have widespread negative ramifications in the local television marketplace for viewers, advertisers and broadcasters. See BIA Study at 16-26.

A. The BIA Study Identifies a Myriad of Practical Problems and Challenges Raised by the Alternative Market Definitions

As shown above, the current system of defining local television markets is based on marketplace realities, especially the present viewing patterns of local consumers, and counties are assigned to markets based on these actual viewing patterns (and reassigned as viewing habits change). Therefore, revisions to the present method of defining local television markets inevitably will move away from current assessments of consumers' real-world preferences – and likely toward a method of defining markets less grounded in evidence from the actual television marketplace. Indeed, all three proposals for redefining markets shift from factors grounded in the marketplace and toward the use of static state boundaries as the only or primary factor in defining markets.⁴³ The adoption of any of these three alternatives would result in less rational and less useful markets, ones essentially untethered to viewing and population patterns and the economics of the television marketplace.

The BIA Study identifies a number of reasons why these alternatives would result in arbitrarily-defined markets and produce various adverse effects on the functioning of

⁴³ The first proposal would rely solely on state boundaries to define markets in terms of the 50 states. The second proposal would divide states into multiple markets. The third would modify existing DMAs so that they do not cross state lines, which would involve the reassigning of counties from one state currently included in the DMA of another state to another DMA in their “home” state.

the local video marketplace. As an initial matter, many large states (especially those with numerous sizable population centers separated by considerable distances, such as California or Texas) are simply too large to constitute rational local television markets, as they do not reflect viewing patterns or the local television advertising marketplace. BIA Study at 18-19.

Defining television markets based solely or largely on state boundaries would be arbitrary because there are a number of cases where certain areas of states are more closely aligned with counties in adjoining states than with counties in their own state. BIA Study at 20 (noting several examples, including northern Idaho counties in the Spokane, WA television market, which follow Pacific Time Zone hours like counties in Washington, rather than Mountain Time Zone hours followed by the rest of Idaho).

Similarly, redefining DMAs so that they do not cross state lines would result in many reassigned counties becoming part of television markets where the stations are geographically very distant and have few, if any, ties to those counties.⁴⁴ Because viewers routinely watch stations located in adjoining states to obtain programming relevant to them, redefining markets based solely or in large part on state boundaries would easily jeopardize consumers' access to their preferred programming, if those cross-border stations were no longer "in their markets" (and thus, for example, were no longer available via cable or satellite). BIA Study at 22. Moreover, as BIA discusses, it

⁴⁴ BIA Study at 24-25. For example, if Dona Ana County, NM (currently part of the adjacent El Paso, TX market) were reassigned to the in-state Albuquerque market, the viewers would then receive "local" television from Albuquerque stations located 200 miles away – rather than from El Paso stations only 50 miles away. It is highly unlikely that these Dona Ana county consumers would receive more relevant local programming, especially local news, weather and emergency information, from stations so much more distant.

would be challenging to formulate rational criteria for reassigning counties to newly-defined state-based markets, especially in counties where stations from different markets and different states reach significant segments of those counties' viewers or where counties (previously assigned to out-of-state markets) are roughly equidistant to two or more in-state markets. BIA Study at 22-23, 25. As explained in more detail in the BIA Study, it is therefore highly unlikely that redefined markets based on state boundaries rather than marketplace criteria will result in television markets that provide greater amounts of programming preferred by viewers, especially locally-oriented programming.⁴⁵

Beyond the problems and challenges identified in the BIA Study with the proposed alternatives to the DMA system, the Commission, in preparing its report to Congress, should also focus on two further important points about the current functioning of the local television marketplace. First, the DMA structure is the most efficient system for ensuring a robust local television advertising market and, in turn, for providing the financial basis for quality news and local programming production. Second, there is no public benefit in allowing MVPDs to import duplicating network or syndicated programming from stations in a neighboring market.

⁴⁵ The BIA Study also discusses how redefining markets will inevitably cause many local television ownership arrangements to fall out of compliance with the FCC's ownership rules. *Id.* at 22, 23-24, 26. For example, there are nearly 300 instances where one entity owns more than two local television stations in a particular state, and thus, would be in violation of the local ownership rules if markets were redefined strictly on state boundaries. *Id.* at 22. In addition, redefining markets based on state boundaries would have very significant effects on the carriage requirements for local cable and satellite systems, especially given the very large numbers of full-power television stations in some states. *Id.* at 20-21 (noting 107 full-power stations in California and 135 in Texas).

B. Alternatives to the Current DMA System Would Harm Local Stations' Ability to Attract Advertising, Resulting in Fewer Resources for Local News, Sports and Informational Programming

Local advertisers rely on the DMA system when deciding how to buy and sell advertising. For example, a local car dealership needs to reach the audience most likely to purchase a car from his or her lot, and those buyers are most likely to come from the dealer's local DMA. Moreover, after placing an advertising buy on a local television station, the car dealership needs to examine the effectiveness of its purchase to make rational, effective advertising decisions in the future. And, of course, the station needs to attach a price for its available commercial time based on its relative competitive position in the market. DMAs and their related audience measurements make all of this possible.

To abandon or undermine the DMA as the structure for television markets would disrupt the efficient functioning of the advertising marketplace, to the detriment of viewers, advertisers and stations.⁴⁶ A change in the way markets are fundamentally structured could inaccurately and artificially shrink the size and, perhaps, rank of some stations' markets and artificially increase the size and rank of other markets. *Id.* Such a decrease in the size or rank of a station's market may preclude it from being included in national advertising campaigns and have a negative impact on station revenues. *Id.* Moreover, a market structure that does not account for population centers, as the DMA does, would likely look like a group of counties gerrymandered together and result in inefficient buys for advertisers trying to reach consumers in their particular areas. *Id.*⁴⁷ In

⁴⁶ See NHR White Paper, at 3-4.

⁴⁷ As the BIA Study points out, if stations were defined in terms of the 50 states, many television markets simply would be too large to function as an efficient mechanism for local advertisers. For example, local businesses in San Francisco want to target their

this inefficient market, advertising dollars would go to other media outlets, ultimately reducing the ability of local stations to deliver quality, locally-oriented programming. *Id.* Everyone loses in this scenario—viewers, stations and advertisers.

C. There Is No Public Interest in Allowing MVPDs to Retransmit a Distant Station’s Duplicating National Network or Syndicated Programming

As briefly discussed in the BIA Study, defining television markets more strictly on state boundaries, rather than the realities of the television marketplace, would disrupt the long-standing, important contractual relationships local television stations have with program suppliers (both networks and syndicators). BIA Study at 21, 25-26.⁴⁸ Below, we explain in greater detail the value of such exclusivity agreements and why the public interest is not served by disrupting them, either through the redefinition of television markets or by allowing MVPDs to retransmit duplicating network or syndicated programming.

As we discuss in more detail in Section V, MVPDs can already retransmit in-state local programming across DMA boundaries without any change in the law. Therefore, it is simply unnecessary to modify existing television markets to permit provision of in-state programming in this manner. And, any change that would allow MVPDs to retransmit *duplicating* network and syndicated programming from out-of-market stations

advertisements to potential customers in the San Francisco area – they would have little use for a “California”-based advertising market including, for example, viewers in San Diego unlikely to patronize local businesses in San Francisco. BIA Study at 19. Similarly, consumers in Arlington, VA are not likely potential customers for Norfolk or Richmond based local business advertisers. *Id.* at 19-20.

⁴⁸ For example, network affiliation agreements include terms for market-wide exclusivity, but such terms would be jeopardized by the definition of a television market on a state-wide basis to include dozens of stations, including multiple stations affiliated with the same network. BIA Study at 21.

is particularly unnecessary (and, indeed, harmful, as explained below). Some proposals have gone so far as to call for the Commission to repeal its network non-duplication, syndicated exclusivity, and sports blackout rules—rules that otherwise merely provide a mechanism for television stations to enforce their market-acquired program exclusivity rights to prevent the retransmission of such duplicating programming.⁴⁹ These types of proposals are contrary to the public interest because they would undermine the local broadcasting system that Congress and the Commission designed and have maintained for more than 70 years.

The simple fact is that exclusivity -- as Congress and the Commission have consistently recognized -- constitutes an essential component of America's unique system of free, over-the-air television stations licensed to serve local communities.⁵⁰ Local affiliates always have negotiated with networks and syndicated programming sources for exclusive programming within their markets. Advertisers on local broadcast stations expect and, indeed, pay for that exclusivity; these advertising revenues support stations' local programming, including news, and their ability to serve their communities. Exclusivity, which is limited by Commission rules to narrowly defined geographical zones near stations' home communities, enhances competition by strengthening local stations' ability to compete against the hundreds of non-broadcast and non-local

⁴⁹ See H.R. 3216, 110th Cong., Section 2(d).

⁵⁰ See, e.g., FCC, *Retransmission Consent and Exclusivity Rules: Report to Congress Pursuant to Section 208 of the Satellite Home Viewer Extension and Reauthorization Act of 2004* (Sept. 8, 2005) ("2005 FCC Retransmission Consent Report"), at ¶ 50; *Implementation of the Cable Television Consumer Protection and Competition Act of 1992*, Memorandum Opinion and Order, 9 FCC Rcd 6723 (1994), at ¶ 114; S. REP. NO. 102-92 (1991), at 38.

programming networks offered by cable and satellite. The Commission's rules do not mandate exclusivity, but merely enable broadcasters to protect the contractual arrangements they "have entered into for the very purpose of securing programming content that meets the needs and interests of their communities."⁵¹ Programming exclusivity, and the system of local service it permits, is not a weakness of our broadcast system, but, rather, is a unique and highly valued strength.

In light of the independent economic reasons supporting the programming exclusivity rules, and the rules' integral role in promoting competition, it is no surprise that the Commission, in a 2005 Report to Congress, expressly rejected various MVPDs' proposals to allow MVPDs to abrogate and bypass the local program exclusivity rights of stations if they could not reach agreement on retransmission consent with local stations.⁵² This conclusion remains entirely valid today.

Recognizing and supporting the current retransmission of local programming to viewers served by television stations in a neighboring state or the retransmission of local programming to in-state but out-of-market viewers—*and the ability to retransmit such programming without any change in the law*—should be a fundamental component of the Commission's report. There is simply no need to either redefine the current structure of local television markets, or otherwise alter existing regulations pertaining to privately-negotiated program exclusivity arrangements, to promote viewers' access to in-state programming offered by out-of-market stations.

⁵¹ 2005 FCC *Retransmission Consent Report* at ¶ 50.

⁵² See 2005 FCC *Retransmission Consent Report* at ¶¶ 50-51.

V. No Changes To Current Law Are Required To Provide Viewers With Local Programming, Including In-State Programming, From Stations Outside Their Existing Market

Neither Congressional nor Commission action is necessary to provide consumers with more “in-state” programming than what they already can receive. Neither the Copyright Act nor the Communications Act nor state boundaries nor DMA boundaries prevent MVPDs from retransmitting in-state local programming to viewers who reside in DMAs served primarily by “out-of-state” stations. MVPDs can obtain a private copyright license and retransmission consent from a particular station to retransmit the station’s local programming into out-of-market areas without any change in law or regulation.

A. The Copyright Law and the Communications Act Do Not Prohibit Retransmission of Copyrighted Local Programming to In-State, Out-Of-Market Viewers

Any notion that legislation is necessary to allow MVPDs to export a station’s local news, weather, sports, or public affairs programming to in-state, out-of-market subscribers is based on a fundamental misperception of copyright and communications law.

Local television signals include multiple and diverse programming that is owned by multiple and diverse copyright owners. In virtually all cases, however, television stations own and control the copyrights to their own locally produced programming— i.e., local news, local weather, and local public affairs programming. The copyrights for network and syndicated programs are owned by different copyright owners, making it difficult (although not impossible) for an MVPD to obtain *all* of the necessary copyright licenses for the programming contained in a television station’s signal. For that reason,

Congress created a statutory copyright licensing scheme to enable MVPDs to retransmit the content broadcast by a television station without having to obtain licenses from, and individually pay royalties to, each copyright owner of network, sports, and syndicated programming.

In short, the *local* statutory copyright license⁵³ allows MVPDs to retransmit *all* programming contained within a local television station’s signal throughout that local station’s DMA (and in areas where the station is “significantly viewed”⁵⁴) without the consent of the various copyright owners and without paying any incremental copyright royalty fees.⁵⁵ MVPDs regularly rely upon this free, *local* statutory copyright license to retransmit programming throughout the station’s DMA and in areas where the station is significantly viewed.

The distant statutory copyright license, on the other hand, generally requires MVPDs to pay an additional copyright royalty fee to retransmit a station in communities outside its local market and areas in which it is not significantly viewed. But MVPDs that want to provide their subscribers with programming that is not otherwise available, such as in-state news and informational programming from an adjacent market, are authorized by the Copyright Act to retransmit such a signal without needing to negotiate

⁵³ See 17 U.S.C. § 111 (cable retransmissions) 17 U.S.C. § 122 (satellite retransmissions).

⁵⁴ Communities in which a station is deemed to be “significantly viewed” are determined by the Commission. A station must achieve a certain level of “over-the-air” viewing in a community, pursuant to the viewing standard set forth in 47 C.F.R. § 76.5(i), to be considered “significantly viewed” in that community. The Commission’s rules allow interested parties to modify the “significantly viewed” list based on documented changes in local over-the-air viewing patterns.

⁵⁵ The geographical scope of the local cable compulsory license is somewhat different for noncommercial, educational television stations, but that difference is not material to the discussion here.

separate licenses with the owners of all the programs on the station. The Commission's exclusivity rules do not preclude MVPDs from providing non-duplicative programs, including station-produced news and informational programming. Cable systems take advantage of this statutory license to supplement programming available from local stations.⁵⁶ Thus, no change in the Copyright Act is necessary to give MVPDs access to out-of-market signals that provide station-produced in-state programming.

Nor is any change in the Communications Act necessary. Although MVPDs may not retransmit, with a few exceptions, a television station's signal without the station's consent,⁵⁷ stations may, and do, grant such consent in the private marketplace. Just as a station may grant an MVPD a private copyright license to retransmit its local programming without any change in copyright law, a station may grant an MVPD the right to retransmit the signal containing the local programming without any change in communications law.

If Members of Congress believe that viewers desire to have access to locally-produced news, weather, sports, public affairs, and informational programming from out-of-market television stations in their home state, they can simply encourage local MVPDs to retransmit those in-state stations. The originating in-state stations have every incentive to consent to the retransmission of their *local* programming, and they are doing so today. MVPDs, therefore, have every tool available today to retransmit local programming from in-state, out-of-market stations.

⁵⁶ For example, the cable system serving Mountain Home, AR, which is part of the Springfield, MO DMA, carries KATV, the ABC affiliate from Little Rock, AR as a distant signal.

⁵⁷ See 47 U.S.C. § 325(b).

B. Stations Are Already Licensing Their Copyrighted Local Programming to MVPDs for Delivery to In-State Viewers in Non-Local DMAs

DMA boundaries are no obstacle to delivering locally-produced programming into in-state, out-of-market areas. Local stations can—and do—grant MVPDs a private copyright license and retransmission consent to “export” their local news, weather, sports, public safety, and informational programming across DMA lines to serve in-state viewers in other DMAs. MVPDs can easily place this local programming on a low-tier public access channel without disrupting or supplanting another cable programming channel. The result is a private marketplace transaction in which the MVPD, the local station, and the in-state, out-of-market viewers all benefit at no cost to any of the parties.

There are many examples, in DMAs throughout the country, where viewers served primarily by out-of-state television stations have access to in-state television signals. Here are just a few:

- * Comcast imports the local news programming of KOAT-TV, Albuquerque, New Mexico, into Las Cruces, New Mexico, which is located in the El Paso, Texas, DMA.
- * Comcast cable systems in Abington, Glade Spring, and Saltville, Virginia (in the Tri-Cities Tennessee/Virginia DMA) import the local newscasts of WDBJ-TV, which is in the Roanoke, Virginia, DMA.
- * Time Warner Cable, in Robeson and Scotland Counties, North Carolina, both of which are located in the Myrtle Beach, South Carolina, DMA, imports into those two North Carolina counties the local news and weather programming of in-state Station WECT-TV, Wilmington, North Carolina, which is located in the Wilmington DMA.
- * Cable companies in the southern Colorado counties of Montezuma and La Plata, which are in the Albuquerque, New Mexico, television market, import the local in-state news from Denver television

stations.

- * Charter Cable in Johnson City and Bristol, Tennessee (in the Tri-Cities Tennessee/Virginia DMA) imports the local newscasts of WBIR-TV, which is in the Knoxville, Tennessee, DMA.
- * Cable companies in several northeastern North Carolina counties located in the Norfolk, Virginia, DMA import and retransmit into those counties the local news from North Carolina stations in the adjacent Greenville-Washington-New Bern, North Carolina, DMA.
- * Comcast imports the local newscasts of stations in the Atlanta, Georgia, DMA to viewers in the northwest corner of Georgia who are otherwise served by television stations in the Chattanooga, Tennessee, DMA.

Satellite companies have the very same ability to retransmit local programming from in-state, out-of-market stations by obtaining a copyright license and retransmission consent from the distant station—although for years they were reluctant to do so. That is now changing. For example, DIRECTV is exporting the local programming of KATV in Little Rock, Arkansas, into the counties in southwest Arkansas in the Shreveport DMA that are served by Shreveport stations. To the extent that MVPDs do not pursue carriage of in-state local programming to in-state, out-of-market subscribers, it is the result of their own business decisions—not a result of any prohibition in the law or Commission rules.

VI. To The Extent That Viewers Desire Additional Programming From In-State And Out-of-State Stations, Technological Innovation, Not Government Intervention, Is The Proper Solution

In today's digital world, with multicast channels on broadcast television, ever-expanding capacity of cable and satellite networks, and steaming via the Web, consumers have unprecedented access to local television station programming. Because technological developments are further enhancing viewers' access to in-state

and other locally-oriented broadcast programming, there is even less reason to disrupt the existing structure of local television markets in an effort to promote consumers' access to locally relevant programming.

In the last five years, consumer access to video programming has expanded exponentially. Digital multicast channels, on demand programming via MVPDs, and streaming and cached video on the Web provide viewers ever-increasing amounts of popular and niche programming, including in-state and other locally-oriented programming, that might not have been available to consumers in the analog era. There are currently more than 1,500 broadcast multicast channels, a number of which include local programming.⁵⁸ For example, NBC Local Media recently announced new "Nonstop" multicast channels in Philadelphia and Washington D.C. that will feature about eight hours of local programming per day.⁵⁹ Any viewer able to receive the digital signal of a full-power station's primary channels, including viewers in adjacent DMAs, can also receive that station's multicast channels, thereby increasing the amount of local and/or in-state programming. Indeed, consumers today across all counties receive over the air, on a weighted average basis, 18.8 program streams from commercial in-state full-power television stations and 6.1 program streams from non-commercial in-state stations. BIA Study at 8.

⁵⁸ BIA, Media Access Pro, 2010.

⁵⁹ See Malone, Michael, "Exclusive: NBC Local Media Sets 'Nonstop' Launch Dates," *Broadcasting and Cable*, Oct. 21, 2010. NAB has discussed the multicast programming offered by local television stations in detail in previous comments. See Comments of NAB in GN Docket No. 10-25 (May 7, 2010), at 17-22 (describing extensive multicast programming, including local and regional news and sports, foreign language, political, children's and other niche programming).

MVPDs are increasingly using their on-demand functionalities to provide viewers with anytime access to local and in-state programming. Comcast, for example, offers on demand local programming across the country, including sports programming in Washington State, where the local Western Hockey League team, the Spokane Chiefs, can be viewed anytime, for free, by Comcast subscribers. Also in Washington, Comcast subscribers have on demand access to thrice daily local newscasts from Seattle station KOMO.⁶⁰

Additionally, many local stations are now offering their local newscasts and other video for online streaming, available to anyone in the world, including out-of-market viewers who may be unable to receive that programming via traditional means – over-the-air or via an MVPD. KPRC, the local CBS affiliate in Houston, for example, offers live streaming of their newscasts and cached videos of their most popular stories. KPRC is just one of many stations that have made their newscasts available online – and the numbers appear to be increasing.

And local station websites are not the only place to obtain local programming video on the Web. Local sports syndicated networks, such as Wazoo Sports Network in Kentucky, stream live local sports programming on the Web, including local minor league baseball games, high school basketball games and much more.⁶¹ Similarly, viewers that live in states with Atlantic Coast Conference (ACC) universities can see their local school's games for free on Raycom Sports website – even if those viewers live in a so-called out-of-state DMA.

⁶⁰ See Xfinity Local On Demand website and local listings, available at <http://www.comcastgetlocalondemand.com>.

⁶¹ See www.wazoosports.com.

Increasing access to broadcast programming, due to the technological developments illustrated above, demonstrates even more clearly that there is no need to change the existing television market structure. The FCC, when analyzing alternatives to the existing DMA system for its report, should consider how technological innovation provides the best solution to any perceived problem with consumer access to broadcast programming.

VII. Conclusion

The above comments and attached data show an extraordinarily high level of over-the-air in-state television service to the American public. The digital signals (and multiple programming streams) being broadcast by local television stations reach very wide audiences. Both cable and satellite systems also provide in-state television stations, not only from their home markets but often from adjoining markets. Viewers may further access the programming of local stations via the Internet. In addition, an examination of specific local television markets shows that out-of-state (but in-market) television stations frequently offer extensive locally-oriented service to viewers (such as the locally-oriented programming offered by Washington, DC stations to viewers in northern Virginia). Moreover, broadcast stations today are licensing their copyrighted local programming (such as news) to MVPDs for delivery to in-state viewers in non-local DMAs.

Efforts to alter local television market definitions to ensure the availability of local service are thus not only unnecessary, they are also fraught with difficult practical problems. Alternative methods of defining television markets (e.g., use of state boundaries) would not be based on actual viewing patterns, as are the existing

television markets, and thus would be less reflective of the “real world” television marketplace. The reassignment of counties to different markets could easily result in many viewers receiving service from more geographically distant television stations with lesser connections to those viewers. Redefining markets has the real potential to disrupt local television advertising markets, long-standing and important program exclusivity arrangements, and the carriage obligations of cable and satellite operators. Finally, if television markets are redefined, existing local stations’ ownership structures could easily fall out of compliance with the FCC’s rules.

As shown by these comments and the data in the attached report, there is no need to take actions that will severely disrupt the local television marketplace and ultimately harm viewers. NAB thus urges the Commission to report to Congress on the high levels of in-state and out-of-state broadcast stations and programming available to consumers and on the need to avoid needless, serious disruption to local television markets.

Executive Summary

Questions have arisen as to the extent to which consumers receive broadcast signals and programming (whether over the air or via cable/satellite delivery) from television stations located in their own state.

This paper examines these issues by estimating the in-state and out-of-state audience reached by local television stations throughout the U.S. We look at delivery of local television stations to consumers via over-the-air transmission and through local cable and national satellite delivery. We also analyze three alternatives for defining local television markets put forth by the Federal Communications Commission (FCC) and the implications of altering the existing system of defining local television markets.

Some of the key results from our analyses include:

- Over-the-air reception by at least one in-state full-power television station reaches 3,067 counties (out of a total of 3,141 counties) and 275.2 million people (97.8% of the total 2000 Census population).
- On a weighted average basis, consumers across all counties nationwide receive over the air 12.2 in-state full-power television stations.
- In the average television market, 96.1% of the local market's population can receive at least one in-state full-power television station over-the-air.
- On a weighted average basis, 12.3 in-state television stations are carried across all cable reporting units.
- Almost all (99.99%) of subscribers to these cable reporting units are estimated to be receiving at least one in-state television station.
- For Dish Network, 97.8% of their subscribers can receive at least one in-state television station. For DIRECTV, 93.9% of their subscribers can receive at least one in-state station.
- Across all counties on a weighted average basis, Dish Network subscribers receive 9.7 in-state television stations and DIRECTV subscribers receive 8.9 in-state television stations.

In light of this data, revisions to local television market definitions to ensure the availability of local service are not only unnecessary, they are also fraught with difficult practical problems. Alternative methods of defining television markets (e.g., use of state boundaries) would not be based on actual viewing patterns, as are the existing television markets, and accordingly would be less reflective of the "real world" television marketplace. The reassignment of counties to different markets could easily result in many viewers receiving service from more geographically distant television stations with lesser connections to those viewers. Redefining markets has the real potential to disrupt local television advertising markets, long-standing program exclusivity arrangements, and the carriage obligations of cable and satellite operators. Finally, if local television markets are redefined, existing local television ownership structures would likely fall out of compliance with the FCC's ownership rules. As shown by the voluminous data in this report, there is no need to take actions likely to produce these various adverse and disruptive marketplace effects.

**ANALYSIS OF IN-STATE AND OUT-OF-STATE REACH
BY LOCAL TELEVISION STATIONS**

Introduction

American consumers today receive the programming of local television stations in various ways. Where once consumers received broadcast programming only via over-the-air transmissions, they now can receive it from a local cable system or a national satellite delivery system or even via the Internet. The reach of local television stations has thus expanded, with these stations now serving larger geographically dispersed areas.

Questions have arisen as to the extent to which consumers receive broadcast signals and programming (whether over the air or via cable/satellite delivery) from television stations located in their own states.¹ This paper examines these issues by estimating the in-state and out-of-state audience reached by local television stations throughout the U.S. This report looks at delivery of local television stations via over-the-air transmission and through cable and satellite delivery. The report also analyzes alternatives for defining local television markets put forth by the FCC, in response to Congress's request.

We begin this survey of local television service by analyzing the number of consumers who can receive television stations located within their own state through over-the-air transmission. That analysis will provide estimates of the population that receives at least one in-state full-power television station, looking at both individual county and individual television

¹ Congress directed the FCC to study this issue when it passed the Satellite Television Extension and Localism Act of 2010 (STELA), Title V of the "American Workers, State, and Business Relief Act of 2010," Pub. L. 111-175, 124 Stat. 1218 (2010).

market levels. We also will provide summary statistics on the number of in-state and out-of-state television stations received in each county and television market throughout the country.

We then examine the provision of in-state television stations through carriage by local cable systems. Using data submitted to the Copyright Office, we will quantify (both on a county and television market basis) the numbers of households that receive television stations from their own state delivered by their local cable system. Finally, we conduct a similar analysis on satellite delivery of local television stations. Using data from both national satellite companies as to the local television stations they deliver to specific markets, we can determine the number of satellite-served households receiving television stations from their own state, both on a county and television market basis.

We conclude by evaluating three alternatives for defining local television markets offered by the FCC and the implications of altering the well-established system of Designated Market Areas (DMAs).

An analysis of the data clearly shows the very high levels of in-state broadcast television service currently being provided to the American public. Nearly 98% of the American public can receive at least one in-state full-power television station via over-the-air transmission. Almost all cable subscribers are also being provided at least one in-state television station. Finally, between 94-98% of satellite subscribers are also provided at least one in-state television station. On a weighted average basis, consumers across all counties can receive over the air 12.2 in-state full-power television stations, and 12.3 in-state television stations are carried across all cable system

reporting units. Based on this data, it would appear unnecessary to alter how television markets are defined so as to ensure that consumers have access to in-state broadcast television service.²

Moreover, there are several significant problems with the proposed alternatives to the present definition of local television markets. First, and foremost, none of these alternatives will reflect the actual present viewing patterns of the American public, and their adoption could ultimately result in decreases in the amount and quality of locally-oriented programming, including news and information, available to television viewers in many markets. Second, these alternative definitions will likely seriously hamper the ability of many local television stations to generate advertising revenues, as these stations will be less able to provide the specific local audiences local businesses want to reach. Third, altering market definitions almost certainly would disrupt important contractual programming relationships, both for network delivered and syndicated programming. Fourth, adoption of these alternatives most likely will lead to significant numbers of station owners being in violation of the existing local television ownership rules, thus needlessly upsetting long-established ownership structures in local television markets.

² We note that this report does not address the provision of in-state programming to consumers via the Internet or by stations that license their local programming to multichannel providers for delivery to in-state viewers in non-local DMAs. Thus, the data presented here understate the total level of in-state programming available to viewers.

Delivery of Local Television Stations via Over-the-Air Transmission

Description of Methodology Used in Analysis

With the transition to digital television technology, local television stations transmit a very robust signal with considerably more “information” than the previous analog television signals. Digital technology enables television stations to offer enhanced services to their audiences. Many stations are utilizing the multicast capabilities of digital technology to provide more streams of programming to their viewers.

To quantify the reach of local television stations, we applied the Longley-Rice methodology for estimating stations’ coverage patterns.³ DataWorld, a subsidiary of BIA/Kelsey, maintains a current database of all broadcast technical facilities that allow us to estimate these coverage patterns. We compared these coverage patterns with the 2000 U.S. Bureau of the Census population information on a census block basis.⁴ Census blocks are the smallest areas for which population data are provided. There are nearly 5.6 million census blocks in the U.S. These census blocks do not cross county boundaries.

³ The FCC suggests using the Longley-Rice methodology, as described in OET Bulletin No. 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, July 2, 1997, Federal Communications Commission. See FCC Public Notice, “Media Bureau Seeks Comment for Report Required by the Satellite Television Extension and Localism Act on In-State Broadcast Programming,” MB Docket No. 10-238 (Nov. 23, 2010), p. 2.

⁴ Unfortunately, at this time the 2010 Census information is not available on a census block basis. We do not believe that the 2010 Census information would show materially more consumers not being served by local television stations as there continues to be migration towards central urban areas in the U.S., areas that are presently well served by local television stations.

For each census block, we determined whether local television stations' signals reached the centroid (i.e., middle) of that census block. If a station's signal reached that centroid, then we counted that station as serving the population within that census block. Since the identity of each station is known, we knew whether that television station was reaching a census block within the state in which it was licensed, or whether it was an out-of-state television station. We could then calculate the total number of in-state and out-of-state television stations reaching each of the 5.6 million census blocks and the population served by those stations. The census block information on the populations served by varying numbers of in-state and out-of-state television stations can then be aggregated to the county level, thereby generating estimates of the population within each county being served by different numbers of in-state and out-of state television signals.

For example, Autauga County, AL has 981 census blocks within its borders and a total population of 43,671. Table 1 below shows the number of Autauga, AL census blocks that receive varying numbers of in-state full-power television stations and the corresponding population within those census blocks. The weighted average (by the population within these census blocks) of the number of in-state full-power television stations received in this county is 11.1.

Table 1 – Number of Census Blocks and Corresponding 2000 Population Receiving Varying Numbers of In-State Television Stations in Autauga County, AL		
Number of In-State Television Stations Received	Number of Census Blocks	Total Population w/n Census Blocks
3	7	91

County Level Results – Full Power Television Stations

There are 3,141 counties in the U.S., almost all of which are included in the 210 television markets as delineated by Nielsen Media Research.⁵ In-state full-power television stations reach at least one census block in an overwhelming majority of these counties -- 3,067 counties have at least some of their population being served by at least one in-state television

station. The remote counties that do not receive any service over the air by full-power stations are very sparsely populated. In total, there are only 765,716 people in the 74 counties that do not receive in-state television station service over the air to any part of the county.

Within the 3,067 counties being served by some in-state television stations, the vast majority of the population can receive at least one in-state television station. Overall, 275.2 million people in these counties are able to receive at least one in-state television station over the air, while only 5.462 million in those counties cannot.⁶ Combined with the 765,716 people in counties with no in-state television reach, the total number of people unable to receive in-state full-power television signals over the air is approximately 6.227 million, or just 2.2% of the total population in all 3,141 counties. In other words, 97.8% of the total population can receive at least one in-state full-power television station via over-the-air transmission.

In terms of the number of in-state full-power television signals received, the results are equally impressive. Across all 3,141 counties, the weighted average (by the relative population in each county) of in-state television stations received is 12.2 stations.⁷ Within these 3,141 counties, consumers also receive a weighted average (by the relative population in each county) of 3.8 out-of-state full-power television stations. Appendix 1 lists all 3,141 counties with the percentage of each county's population receiving over the air at least one in-state full-power

⁵ There are 13 very remote counties in Alaska that are not included in any of the 210 television markets.

⁶ As shown below, however, many of these viewers will have access to in-state stations and programming by cable, satellite or other means.

⁷ Further analysis shows that consumers receive, on a weighted average basis, 9.8 commercial in-state television stations and 2.4 in-state noncommercial stations.

television station, and the weighted averages of the number of in-state and out-of-state full-power television stations received in each county.

We further observe that these data are conservative in demonstrating the actual level of in-state broadcast service available to consumers. Because significant numbers of television stations are multicasting, consumers today receive, across all counties on a weighted average basis, 18.8 program streams from commercial in-state full-power television stations and 6.1 program streams from non-commercial in-state stations. Digital technology has clearly enhanced the amounts of in-state programming channels available to viewers over the air.

In addition, we stress that this data about the over-the-air reach of broadcast stations is limited to full-power stations. We will conduct further analyses relating to the in-state, over-the-air reach of Class A, low-power television and translator stations. This updated data will demonstrate that the over-the-air reach of television stations, taken as whole, is even greater than the already impressive reach of full-power stations alone.

Television Market Results – Full-Power Television Stations

Examining these results on a television market basis requires aggregating the county level data by the markets to which they are assigned.⁸ In the average television market, 96.1% of the market population can receive over the air at least one in-state full-power television signal. There are 72 television markets where 100% of the market population can receive at least one in-state television station over the air. Moreover, there are 67 markets where the weighted average

number of in-state full-power television stations received over the air exceeds 10 stations (with 152 markets receiving more than five in-state stations and 187 markets receiving more than three in-state stations). Appendix 2 includes a full list of all 210 television markets and the populations within these television markets receiving over the air at least one in-state full-power television station. This appendix also identifies the weighted average number of in-state and out-of-state full-power television stations received over the air in each television market.

Cable Delivery of Local Television Stations

Supplementing the extensive over-the-air service documented above is the provision of local television stations by local cable systems. Beyond providing the local television stations within the cable system's television market, many cable systems carry additional television stations from other markets (including in-state markets). This carriage of "distant" signals thus often provides consumers with another source of in-state television service.

Methodology of Determining Cable Delivery of In-State Television Stations

As part of the requirements for the cable compulsory license,⁹ local cable systems have to file semi-annual Statements of Account with the Copyright Office that provide a listing of all television stations they carried. This listing of carried stations includes all the television stations located within the cable system's own television market, as well as the out-of-market (i.e.,

⁸ In a small number of markets, counties are split across two markets. Nielsen Media Research does not make publicly available which census blocks in these split counties are assigned to which of the different markets. Accordingly, we assigned each of these split counties to the market in which the majority of the population is located.

⁹ See 17 U.S.C. § 111.

distant) television stations being carried.¹⁰ There were 3,721 cable reporting units¹¹ that reported to the Copyright Office for the first report period (January – July) of calendar year 2009. Every reporting unit provides one principal city (and its corresponding county and state) that we use to assign its home state and home television market. However, the reporting unit can cross over multiple counties and multiple television markets.¹² Cable systems reported a total of 44,905 television stations carried during the first half of 2009.¹³

This total for the first half of 2009 includes many television stations whose analog and digital signals were both being carried at that time. When calculating the number of distinct television stations, we did not count the simulcast signals in our totals. Furthermore, there is no requirement for the cable system reporting unit to report the carriage of any multicast signals of local television stations. While some cable system reporting units did note carriage of these

¹⁰ The local television station listings submitted to the Copyright Office are compiled by CableData Corp., and the listings for 2009 were provided to us. CableData is a Bethesda, MD database firm that has tracked cable carriage of local television stations for over twenty years. Data supplied by CableData Corp. are used by all parties participating in the distant signal copyright proceedings before the Copyright Royalty Board.

¹¹ Commonly owned cable systems that serve contiguous communities using a single head-end file as a single reporting unit. As a result, there are two small television markets – Zanesville, OH and Glendive, MT – where there were no cable systems reporting units listed. Cable systems in those markets must be included in reporting units of adjacent markets.

¹² It is possible that these cable system reporting units cross state boundaries as well. While this may affect the exact numbers of subscribers receiving in-state television stations, that adjustment should be minor and not change the overall conclusions on the level of in-state television service being provided by local cable systems. As will be shown, many of these cable reporting units are providing out-of-state television stations from adjoining states, expanding the level of in-state television station service to reporting units that cross state boundaries. For example, the cable system in Anderson, KS, carries several Missouri-based television stations. See *infra* page 12.

¹³ The television stations being carried include full-power television stations as well as some Class A television stations and low-power television stations.

multicast signals, we believe that there are a number of carried multicast signals that were not noted. Accordingly, our results understate the total number of program streams from in-state and out-of-state television stations provided to viewers via cable.

For each television station listed for each cable reporting unit we determined whether it was an in-state or out-of-state station by comparing the state of license for the station with the state of the primary city for the cable system. There were 29,087 unique in-state and 9,844 out-of-state television stations carried by cable systems during that time.

Cable System Reporting Unit Level Results

Across all cable reporting units, the weighted average (by the number of subscribers to the reporting unit) of in-state television stations carried was 12.3, with 3.9 out-of-state television stations also being carried.¹⁴ There were only 23 cable system reporting units that carried no in-state television stations, with two of those systems located in protectorates of the U.S. and one at the Guantanamo base in Cuba. After excluding those three systems, only 6,191 cable subscribing households do not have access to any in-state television stations (which represents only .01% of the total number of cable subscribing households included in the CableData database for the first half of 2009). A listing of all 3,721 cable reporting units is included in Appendix 3 with the number of in-state and out-of-state carried television stations noted for each reporting unit.

Television Market Level Results

Clearly, most cable reporting units are providing many in-state television stations, while also providing several out-of-state television stations. As reported above, the national weighted

average is over twelve in-state and nearly four out-of-state television stations being provided to viewers by cable systems, on a reporting unit level basis. Appendix 4 includes a listing of all television markets¹⁵ reporting the weighted (by the number of subscribers) average of the number of in-state and out-of state television stations. Across all markets, the weighted (by the television market's total population) averages of the number of in-state and out-of-state television stations provided via local cable systems are 12.3 and 3.4, respectively.

Many of the in-state television stations carried by local cable systems are from adjacent markets. In fact, of the 12,931 "distant" television stations from other markets being carried by local cable system reporting units, more than half (6,983) are in-state television stations.

The cable system in Anderson, KS provides a good example of a system that carries distant (i.e., out-of-market) but in-state television stations. Anderson, KS is a county in the Kansas City, MO-KS television market, located in the southwest corner of this television market. This cable system carries several in-market Kansas City, MO based television stations, thereby providing in-state stations to its Missouri subscribers. The Anderson, KS cable system also carries one Kansas City, KS local market station (KMCI-TV). Beyond those in-market television stations, the cable system in Anderson, KS also carries three out-of-market television stations from Topeka, KS (KSNT-TV, KTWU-TV, and WIBW-TV), thus providing several more in-state television stations to the Kansas based households in this market.

¹⁴ Averaging these cable systems without weighting by the number of subscribers results in an average number of 7.8 in-state and 2.6 out-of-state television stations being carried.

¹⁵ Recall that only 208 television markets have cable system reporting units within their borders.

Satellite Delivery of Local Television Stations

The final providers of local television stations to be examined are satellite delivery systems, specifically the two national companies providing that service – Dish Network and DIRECTV. As part of their “local into local” services, they provide both in-state and out-of-state television stations.

Methodology of Determining Satellite Delivery of In-State Television Stations

To determine the number of in-state and out-of-state television stations provided to viewers by the two satellite delivery companies, we first need to identify the local television stations being provided to satellite households in specific markets. Both Dish Network and DIRECTV have recently submitted to the FCC¹⁶ a listing of the local television stations being provided in each of the markets¹⁷ in which they offer “local into local” television service.

Unfortunately, these companies do not identify the numbers of their subscribers either on a county or television market basis. Estimates can be made, however, of those subscribers both on a television market and county basis utilizing third party sources.¹⁸ We first use Nielsen

¹⁶ November 23, 2010 Letter to Marlene H. Dortch, Federal Communications Commission, from Stacy Fuller, DIRECTV, Inc., RE: Satellite Television Extension and Localism Act of 2010 (STELA) Section 305 Report; November 24, 2010 letter to Ms. Marlene H. Dortch, Federal Communications Commission, from Alison A. Minea, Dish Network L.L.C., Report pursuant to Section 305 of the Satellite Television Extension and Localism Act of 2010.

¹⁷ Dish Network was providing local television stations in all 210 television markets, and DIRECTV was providing local stations in 170 television markets at that time.

¹⁸ Our use of third party sources may either overstate or understate the specific market estimates of the actual number of households receiving in-state television stations from these two companies. We do not believe, however, that our procedure materially affects our estimates of the overall numbers of households receiving satellite delivered services that provide at least one in-state television station.

Media Research's estimates of penetration by television market for Alternative Delivery Systems (ADS)¹⁹ of multichannel video programming. We can apply that market level penetration to the number of households in those markets and then allocate those households between the two providers of satellite service using their relative national subscriber percentages.²⁰ For the county level estimates we can allocate those market-wide estimates of the number of subscribers for the two companies across the various counties within each market by the relative percentage of the television market's population corresponding to each county.²¹

¹⁹ According to Nielsen Media Research, 30.5% of all television homes subscribe to an Alternative Delivery Service (ADS) provider of Multichannel Video Programming Delivery Services. See http://www.tvb.org/planning_buying/4722/4729. Satellite delivery of multichannel video programming makes up the vast majority of ADS delivery of video programming, as the other options (e.g., SMATV, MMDS, etc.) have few subscribers. According to the most recent FCC report on Multichannel Video Programming Delivery Competition for 2006 there were only 900,000 satellite Master Antenna Service (SMATV) subscribers (a 10% decrease from the year before) and only 100,000 subscribers (the same as the year before) to the wireless cable service provided by Broadband Radio Service (BRS) and Educational Broadband Service (EBS). See In the Matter of Annual Assessment of the Status of Competition in the Market for the Delivery of Video Programming, Thirteenth Annual Report, MB Docket No. 06-189, January 16, 2009, pp. 68-69.

Given the time since that report, we assume that these other ADS providers now serve only 800,000 households, or only 2.4% of all ADS households. We reduce each local television market ADS penetration by that amount to arrive at our estimate of DBS subscribers by market.

²⁰ In the third quarter of 2010, DIRECTV had 18.2 million subscribers while Dish Network had 14.289 million subscribers. See <http://sec.gov/Archives/edgar/data/1465112/000104746910009250/a2200731z10-q.htm> and <http://sec.gov/Archives/edgar/data/1042642/000104264210000019/ddbs10q2010q3.htm>

Note that the subscriber totals are for their general services, not the number of subscribers that receive their "local into local" services, which they do not make public. Therefore, the results in this section are for the number of subscribers that could receive the varying numbers of in-state and out-of-state television stations via these two satellite delivery companies.

²¹ While it would be preferable to have the exact numbers of subscribers for each of the services on a county by county basis, we do not believe our estimation procedure materially affects the results.

County Level Results

Across all 3,128 counties²², the vast majority of satellite subscribers are receiving at least one in-state television station²³ from either one or both of the two satellite delivery companies. For Dish Network, 14.017 million subscribers (97.8% of all their subscribers) located in 2,917 counties can receive at least one in-state television station. For DIRECTV, 17.803 million subscribers (93.9% of all their subscribers) located in 2,648 counties can receive at least one in-state television station.

On average, across the 3,128 counties within local television markets, the average (weighted by the number of subscribers) Dish Network subscriber receives 9.7 in-state and 1.5 out-of-state television stations. For DIRECTV, the weighted average is 8.9 in-state and 1.5 out-of-state television stations. Appendix 5 lists all counties with the number of in-state and out-of-state television stations being provided by both of the satellite services.

Television Market Level Results

As is evident from the county level data, the two satellite delivery companies provide significant levels of in-state television service to their customers. Across all 210 television markets, DIRECTV, on average, provides 5.25 in-state and .88 out-of-state television stations.²⁴ Dish Network, across all 210 television markets, provides on average 6.62 in-state and 1.12 out-

²² Since there are 13 remote Alaska counties not included in any local television market, and thus we do not have any estimate of the ADS penetration in those counties, we are unable to calculate the satellite delivered households in those counties.

²³ While most of the television stations carried by both satellite companies are full-power television stations, some are Class A and low-power television stations.

²⁴ This average includes the 40 markets in which they provide no local television station service.

of-state television stations. Appendix 6 lists all 210 television markets, and reports the weighted average (by the number of subscribers) of in-state and out-of-state television stations provided by the two satellite service companies in each market.

Much like the cable delivery of in-state television stations, the satellite delivery of in-state television stations can include stations from other (often geographically close) markets. For example, in the Wichita Falls, TX-Lawton, OK television market, Dish Network provides three Texas stations from this market (KFDX-TV, KJTL-TV, and KAUZ-TV), two Oklahoma stations from this market (KKTMM-TV and KSWO-TV) and one additional Texas station from another market (KTVT-TV, Dallas, TX).

Analysis of Proposed Alternatives to Television Market Definitions

Section 304 of STELA directed the FCC to analyze whether there were alternative market definitions that “would provide more consumers with in-state broadcasting programming.”²⁵ The analyses above clearly demonstrate the already widespread provision of in-state television services delivered over-the-air, and through cable and satellite delivery systems.

Furthermore, in considering the extent of local television service available to viewers, one must also include the services provided by out-of-state (but in-market) stations. It is clear that in-market television stations have strong incentives to serve all the viewers in their markets, even those located out-of-state.²⁶ In many markets, out-of-state audiences represent a very

²⁵ FCC Public Notice, p. 5.

²⁶ Citing the examples of multi-state television markets of Chicago, Washington, DC, and Memphis, Norman Hecht, a 30+ year veteran of local television station sales and research, stated that “Stations are motivated to serve consumers in all counties of their DMA in order to achieve

significant portion of the overall market's audience. Thus, television stations have the incentive to – and in fact do – serve their in-market, out-of-state viewers by providing them locally relevant programming, including news and information.²⁷ Similarly, in the Washington, DC television market, the share of the population residing in Virginia is 45.0%. Obviously, television stations licensed to the District of Columbia have strong incentives to offer locally relevant programming (including locally oriented news, sports, weather, traffic and emergency information) to Virginians residing within the Washington, DC market.²⁸ One should therefore not assume that only in-state television stations have the incentive or ability to provide locally relevant programming to consumers.

As has been demonstrated, consumers today receive extensive locally oriented service from both in-state and out-of-state (but in-market) stations. Changing the method of defining

the highest possible ratings and advertising revenue.” (emphasis in original). Norman Hecht Research Inc., *Designated Market Areas: How They Relate to Viewers and a Vital Local Television Marketplace* (2009), p.2.

²⁷ See Testimony of Paul A. Karpowicz, President, Meredith Broadcasting Group, Before the Subcommittee on Communications and Technology, Committee on Commerce, Science and Transportation, U.S. Senate (Oct. 7, 2009), p. 2.

“WHNS [is] a station Meredith operates in Greenville, South Carolina. Thirty-four percent of the households in its Designated Market Area (DMA) are located in North Carolina and four percent in Georgia. WHNS provides locally-attuned service to those North Carolina and Georgia communities, just as it does to the South Carolina communities within its coverage area. The nearest North Carolina city of license to these North Carolina counties is Charlotte, which is 95 miles away from Spotsylvania County, NC. Greenville is only 25 miles away.

These out-of-state communities within WHNS's market have close weather, topography, economic, and cultural ties with Greenville, South Carolina. Accordingly, WHNS airs news stories of specific relevance to these local out-of-state counties.”

²⁸ In 42 television markets, the population of one state constitutes between 20-49.9% of the entire television market's population. In 113 television markets, the entire population of the market is located within one state.

television markets is therefore not only unnecessary, it also will have widespread negative ramifications in the local television marketplace.²⁹ It is important to remember that the current definition is based on the actual present viewing patterns of local consumers -- consumers that local retailers and businesses want to reach through advertising.³⁰ Each year, Nielsen Media Research examines tuning data from their four most recent surveys to determine which counties are assigned to which television markets. The counties are assigned to markets based upon where the preponderance of viewing occurs (i.e., based upon which local television stations the local viewers in those markets tune to). Every year, counties are reassigned to reflect changes in those viewing habits. Therefore, alterations to the present method of defining local television markets will move away from up-to-date assessments of consumers' real-world preferences – and likely toward a method of defining markets that is less grounded in evidence from the actual television marketplace.

FCC Alternative Market Definition #1 – State Level Television Markets

The first alternative television market definition offered by the FCC is to define markets “in terms of the 50 states plus the District of Columbia.”³¹ As an initial matter, many large states cannot constitute a rational local television market simply because of their geographic size. For example, the distance between the northern border of California and its southern border is

²⁹ The FCC notes that redefining television markets “would likely affect viewers, the advertising market, the number of stations carried by MVPDs in the redefined local markets, and ownership of broadcast television stations.” FCC Public Notice, p. 5.

³⁰ “Local advertisers are interested in having their advertising messages reach consumers who can purchase their products and services locally.” Norman Hecht Research Inc., *Designated Market Areas: How They Relate to Viewers and a Vital Local Television Marketplace* (2009), p. 3.

approximately 750 miles. The distance between El Paso, TX and Texarkana, TX (nearly 730 miles) is actually further than the distance between Texarkana, TX and Chicago, IL (approximately 670 miles).

Clearly, these distances far exceed the service areas of broadcast television stations. Thus, television markets based on state boundaries would be arbitrary, as they would not reflect actual station service areas, the viewing patterns and preferences of consumers, or the areas in which local advertisers seek to reach audiences. For example, the service areas of television stations located in San Francisco do not reach to San Diego. Stations licensed to San Francisco offer programming oriented to the San Francisco area, but not programming oriented to the interests of viewers in San Diego (and particularly not local news, weather, traffic and sports programming oriented to viewers in San Diego). Finally, retailers and businesses located in the San Francisco area want to advertise on stations in the San Francisco market to reach potential (i.e., local) customers – not viewers in San Diego highly unlikely to patronize local businesses in San Francisco. For these reasons, it would defy logic (and the economics of the local television marketplace) to define markets based on the 50 states.³²

Defining television markets based strictly on state boundaries would also be arbitrary because there are a number of cases where certain areas of states are more closely aligned with counties in adjoining states than with counties in their own state. In fact, in defining DMAs,

³¹ FCC Public Notice, p. 5.

³² More locally, consumers in Arlington, VA should not be considered as part of a “Virginia” television market, as Arlington residents are not within the service area of stations in Richmond or Norfolk, would not receive truly local news and information (particularly traffic,

Nielsen Media Research begins with the Office of Management and Budget-defined Metropolitan Statistical Areas (MSAs), which often involve counties in multiple states.³³ For example, ten northern Idaho counties are part of the Spokane, WA television market. Like the twelve Washington counties in that market, these Idaho counties follow Pacific Time Zone hours, unlike all of the remaining Idaho counties. There are many other instances where a part of a state is more closely connected to an area of another state than with other communities within its “home” state.³⁴

Defining television markets based on state political boundaries would also have a number of far-reaching and unpredictable effects on the video marketplace as a whole. As the FCC noted, if the definition was changed to state-wide areas, the carriage requirements for local cable and satellite systems would expand very significantly.³⁵ Table 2 below shows the total number of full-power commercial and non-commercial television stations licensed to each state and the District of Columbia.³⁶

weather and emergency information) from Norfolk or Richmond, and are not potential customers for Norfolk or Richmond based local business advertisers.

³³ See Chapter 1, Measurement and Reporting Geographies, Statistical Reference Guide, Nielsen Media Research, 2010, p. 1-1. “Each metro or micro area consists of one or more counties and includes the counties containing the core urban area, as well as any adjacent counties that have a high degree of social and economic integration (as measured by commuting to work) with the urban core.” See <http://www.census.gov/population/www/metroareas/metroarea.html>.

³⁴ For example, Vancouver, WA – just across the Columbia River from Portland, OR – is more closely tied to Portland than to Seattle (hundreds of miles away) or other cities in Washington state. East St. Louis, IL is more closely aligned with St. Louis, MO than with Chicago or other Illinois communities.

³⁵ FCC Public Notice, p. 5 (“Carriage of broadcast programming by MVPDs could then apply to all in-state broadcast television stations.”).

³⁶ These state totals do not include any full-power satellite television stations.

Table 2 – Number of Full-Power Television Stations Licensed by State

In addition to fundamentally changing the cable and satellite carriage of local television stations, defining television markets on a state-wide basis will also disrupt the long-standing contractual relationships that local television stations have with program suppliers. Network affiliation agreements include terms for market-wide exclusivity, but such terms would be jeopardized by the definition of a television market to include often dozens of stations, including multiple stations affiliated with the same network. Likewise, contracts for syndicated programming also include market exclusivity provisions, and they too, would be disrupted by the adoption of state-wide television markets.

Finally, the FCC’s local television station ownership rules would be greatly affected by the establishment of state-wide television markets. Under existing local ownership rules, a single

entity can own up to two full-power television stations in the same market so long as there are at least eight independently owned and operating full-power television stations remaining in the market. In most states, there are at least eight independently owned and operated full-power television stations within their boundaries. However, there are 298 instances where one entity owns more than two television stations in a particular state, and thus, would no longer be in compliance with the local television ownership rules. Adoption of a state-wide market definition could accordingly have substantial potential impacts on the existing ownership structure of the local television marketplace.

FCC Alternative Market Definition #2 – Multiple Television Markets Within States

The second alternative suggested by the FCC is to “divide states into multiple markets based on the stations covering different portions of a particular state.”³⁷ This alternative, like the first, would not reflect the actual viewing patterns of the American public. Viewers routinely tune to stations located in adjoining states, as those stations often provide the local news and information most valuable to them. If those stations were no longer “in their markets,” they would not necessarily still have access to that programming (especially via cable or satellite carriage).

This alternative also presents difficult issues with assigning counties to particular markets. In certain counties, for example, stations from different markets reach noticeable segments of those counties’ viewers. Consumers in Howard County, Maryland receive stations located out of state (e.g., in Washington, DC), as well as stations located in different parts of

³⁷ FCC Public Notice, p. 5.

Maryland.³⁸ How would Howard County be assigned? At present, it is assigned by Nielsen Media Research based on the viewing patterns of those living in that county. It would be difficult to formulate an alternative method of assignment that would improve upon actual consumer viewing patterns (even if using that criterion does on occasion result in the assignment of some counties to an “out-of-state” market). Adopting a new method for defining television markets thus risks assigning counties to markets on a basis untethered to actual marketplace realities.³⁹

Much like the first suggested alternative, this alternative would likely generate complexities related to the exclusive geographic areas for network affiliations, as well as exclusivity arrangements for syndicated programming. Changing existing television markets and combining counties into one new television market within a particular state could easily lead to including within a single market stations that are affiliates of the same network or airing the same previously exclusive programming.

Without knowing specifically how states may be divided into new markets, it is impossible to evaluate the impact of this proposal on cable/satellite carriage obligations, existing program exclusivity arrangements or the ownership structure of local television markets.

Existing duopoly situations could be combined in new markets with other full-power television

³⁸ Viewers in Howard County can receive stations from the Baltimore market, but also stations from Hagerstown, MD (which are currently included in the Washington, DC market).

³⁹ Another issue that would arise under this alternative definition would be the assignment of counties that do not receive any local television stations over the air. As shown earlier, the signal of any local full-power television station does not reach 74 counties in the U.S. How would those counties be assigned to individual markets?

stations owned by the same company, thus creating violations of the FCC's local television ownership rule. Additionally, newly defined markets could contain fewer local television stations, leading to the possibility that a number of existing duopolies would violate the FCC's rules because there would no longer be eight independently owned and operated full-power television stations in the new market.

FCC Alternative Market Definition #3 – Modifying Existing Television Markets to Prevent Cross-State Markets

A third alternative offered by the FCC would be to “modify DMAs so that they do not cross state lines by reassigning counties from one state currently included in the DMA of another state to a neighboring DMA in their home state.”⁴⁰ This alternative too would create many difficult practical problems. First, the reassigned counties would become part of television markets where the stations are geographically very distant. For example, Dona Ana County, NM is the only county outside of Texas assigned to the El Paso, TX television market. That county abuts El Paso County, TX, with the center of that county being around 50 miles away from El Paso. In contrast, the center of that county is nearly 200 miles away from Albuquerque, NM, the only television market in New Mexico. Clearly, the stations in the El Paso, TX market are better able to provide local news and information (including local traffic, weather and emergency information) to the residents of Dona Ana County, NM than the Albuquerque, NM stations.⁴¹

⁴⁰ FCC Public Notice, p. 5.

⁴¹ Another example is Texas County, OK, which is part of the Amarillo, TX television market. The center of Texas County is 105 miles away from Amarillo, and nearly 250 miles away from Oklahoma City, OK, the closest Oklahoma market.

As described with the other two alternatives above, this reassignment would not reflect the present day viewing patterns of the American public. The people of Dona Ana County, NM do not receive over the air any of the geographically distant Albuquerque, NM television stations and have few, if any, ties to those stations. Local businesses in Dona Ana county also would have little reason for their advertisements to air on stations located in Albuquerque, hundreds of miles away.

Moreover, it would be challenging to formulate rational criteria for reassigning all of the counties currently assigned to “out-of-state” markets. For example, Spotsylvania County, VA, presently assigned to the Washington, DC market, is nearly as close to the Charlottesville, VA television market as to the Richmond, VA television market. Which market would that county be assigned to? Which assignment criteria would be based in the realities of the television market, as is the current system?

Like the other two alternatives, this alternative of adding counties to existing in-state television markets can lead to problems with existing contracts providing for the exclusivity of network programming and syndicated programming. For example, if the eight Virginia counties of the “Tri-Cities”, TN-VA television market were reassigned to the Roanoke, VA television market, WCYB-TV (Bristol, VA), an NBC affiliate, would be in the same market as WSLS-TV (Roanoke, VA), another NBC affiliate. Many similar conflicts would also arise with respect to existing contracts for syndicated programming exclusivity. In addition, if counties are added to existing television markets, such additions would also affect the carriage obligations of cable systems and satellite operators.

Without knowing how all the counties at issue will be reassigned, i.e., what markets will gain or lose counties, it is impossible to accurately quantify the number of situations where the redefinition of local television markets will result in violations of the local ownership rules. Violations will occur if counties are combined so that owners have too many commonly owned stations in a new market. Additional violations will occur if other markets lose counties and stations, so that existing duopolies are no longer in compliance because the revised markets have fewer than eight independently owned and operated full-power television stations.

Conclusion

Congress has directed the FCC to report on the extent to which consumers receive local broadcast signals and programming (whether over the air or via cable/satellite delivery) from television stations located in their own state, and whether alternative methods of defining local markets would provide more consumers with in-state programming. This paper attempts to document this level of service and to discuss the implications of several alternative television market definitions.

What we clearly showed is a very high level of over-the-air in-state television service to the American public. The digital signals now being broadcast by local television stations are quite robust and reach wide audiences. Both local cable and national satellite systems also provide in-state television stations, not only from their home markets but often from adjoining markets. In addition, an examination of specific local television markets shows that out-of-state (but in-market) television stations frequently offer extensive locally-oriented service to viewers

(such as the locally-oriented programming offered by Washington, DC stations to viewers in northern Virginia).⁴²

Efforts to alter local television market definitions to ensure the availability of local service are thus not only unnecessary, they are also fraught with difficult practical problems. Alternative methods of defining television markets (e.g., use of state boundaries) would not be based on actual viewing patterns, as are the existing television markets, and thus would be less reflective of the “real world” television marketplace. The reassignment of counties to different markets could easily result in many viewers receiving service from more geographically distant television stations with lesser connections to those viewers. Redefining markets has the real potential to disrupt local television advertising markets, long standing and important program exclusivity arrangements, and the carriage obligations of cable and satellite operators. Finally, if television markets are redefined, existing local station ownership structures could easily fall out of compliance with the FCC’s rules. As shown by the voluminous data in this report, there is no need to take actions likely to produce these various adverse and disruptive marketplace effects.

⁴² Again, we note that this report does not even address the additional in-state programming available to viewers via the Internet or through stations that license their local programming to multichannel providers for delivery to in-state viewers in non-local DMAs.

**Designated Market Areas:
How They Relate to Viewers and a Vital Local Television Marketplace**

A Paper developed for the National Association of Broadcasters
September 2009

Designated Market Areas:

How They Relate to Viewers and a Vital Local Television Marketplace

Designated Market Areas (DMAs) play an important role in the local TV marketplace. This paper defines what a DMA is and describes how the DMA facilitates the buying and selling of television advertising time, enabling local stations to serve their communities with local news, weather and sports, coverage of community affairs and events, public service announcements, and other important local information, including vital emergency and disaster relief information.

Revenue from the sale of advertising time supports these important and costly local broadcast services. Nielsen's DMAs were defined to support and make efficient the buying and selling of ad time on local TV stations.

A DMA is a group of counties served by the local TV stations licensed to communities within those counties. There are 210 DMAs in the U.S. Every county in the U.S. is assigned to one and only one DMA. DMAs are ranked by number of TV households (the New York DMA is the largest in the country, with approximately 7.5 million TV households). Nielsen uses samples of households (and persons therein) to produce DMA audience estimates (e.g., ratings) for local TV stations. Stations use these DMA ratings to sell local, regional and national advertising.

The basic building block of a DMA is the Office of Management and Budget's Metropolitan (or Micropolitan) Statistical Area (MSA). In the absence of an MSA, a group of counties including the home county of the originating station serves as the central area of the DMA.¹ An MSA is a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and

¹ Metropolitan and Micropolitan Areas include about 94 percent of the U.S. population and not all counties in the U.S. (<http://www.whitehouse.gov/omb/assets/omb/bulletins/fy2009/09-01.pdf>).

social integration with that core.² **MSAs are not bound by state lines.** Therefore, DMAs are not bound by state lines. For example, the Chicago DMA contains counties in Illinois and Indiana. The Washington, D.C. DMA contains counties in the District of Columbia, Maryland, Pennsylvania, Virginia and West Virginia. The Memphis DMA contains counties in Arkansas, Mississippi, Missouri and Tennessee. Stations are motivated to serve consumers in all counties of their DMA in order to achieve the highest possible ratings and advertising revenue.

In addition to counties within the MSA, a DMA may include adjacent (non-MSA) counties. The determination of adjacent counties to include in the DMA is based on the TV viewing preferences of the consumers residing in those counties. These consumer preferences are examined by Nielsen annually in a formal, statistically accepted manner. County reassignments change the size of DMAs and also can change the rank of DMAs, both of which can impact stations' advertising revenues. Over the last 10 years, the average number of counties reassigned to a neighboring DMA was 19 per year (out of 3,098 counties) and the average number of DMAs affected by county reassignments was 30 per year (out of 210 DMAs)³.

Congress and the Federal Communications Commission (FCC) have long recognized the importance of maintaining America's unique system of free, over-the-air TV stations licensed to serve local communities. Local stations supported by ad revenue provide important locally-oriented information and services to all. Congress has acted consistently to preserve this free, locally-oriented TV system by, *inter alia*, adopting rules for the carriage of local TV stations on cable systems so that *all* viewers – including those choosing to receive television through a subscription service – can continue to receive critical local news and other local services (not just national cable channels).

³ Analysis of Nielsen DMA Status and County Assignment Changes 2000-2001 to 2009-2010 TV Seasons

The importation of TV signals from distant DMAs would undermine this system of local TV service, and thus could have a number of negative consequences for viewers, local TV stations, and for advertisers (or any entity) trying to reach consumers with an advertising (or informational) message. If the importation of a distant TV signal changes viewing patterns as some viewers watch the distant station, then a county or counties where those viewers reside may be reassigned, reducing the size of the DMA and perhaps also its rank. A drop in rank may preclude a DMA from being included in national spot buys (e.g., Top 10, Top 25, Top 50 markets), negatively impacting ad revenues for stations in the market. The reassignment to a different DMA of a county in which one particular station had strong ratings, relative to its local station competitors, will negatively impact that station's ad revenues, thereby affecting the station's ability to provide vital community services, including emergency information. DMAs could be disrupted so that they include more non-contiguous counties, resulting in geographically inefficient buys for advertisers (or other entities) trying to reach consumers and a shift in ad spending from TV to other media. This would ultimately undermine local stations' ability to deliver quality, locally-oriented programming, and could result in a lack of choice for viewers if some stations are no longer financially viable.

Furthermore, the importation of distant TV signals would interfere with program exclusivity arrangements freely negotiated between broadcasters and program suppliers (e.g., networks and syndicators), and would run counter to Congress' and the FCC's localism goals. Television viewers could end up being served by distant (perhaps in-state, but non-local) stations, and consumers could lose access to local news, emergency information, weather alerts and other local interest programming on TV.

Providing consumers with quality local programming supported by the buying and selling of local TV advertising time requires an efficient marketplace. Local advertisers are interested in having their advertising messages reach consumers who can purchase their products and services locally. National advertisers buy commercial time on local DMA stations to augment network television buys and to reach specific targets with an advertising message. For example, national home improvement chains buy time on local DMA stations to advertise seasonal products (lawn mowers, snow blowers) in

specific areas of the country. Movie studios buy time on network television for general release movies and on local DMA stations for limited release movies. Car manufacturers buy time on network television to build brand/model awareness, and local dealer associations buy time on local DMA stations to generate showroom traffic. Clearly defined, stable DMAs are essential to an efficient marketplace—advertisers need to know who they are reaching. Clearly defined, stable DMAS are just as important to the emergency services notification process—emergency services personnel need to know who they are reaching.

Advertising revenue is vital to the operation of a local television station. In its absence, a station cannot function. Beyond paying for programming, ad revenue allows stations to reinvest in the community, developing and executing locally driven initiatives, be it public interest programming, more local event coverage or raising money for local charities. Ad revenue also pays the salaries of tens of thousands of Americans who are employed by local TV stations nationwide (many of whom are directly involved in the gathering and reporting of local news and information, sports, and weather and emergency programming) and tens of thousands more who provide goods and services to local TV stations. As with almost every business, human resources are TV stations' largest expense. Ad revenue also helped fund the conversion of analog transmission facilities to digital and pays to power transmitters to keep Americans informed and safe in emergency situations.

The local broadcast TV industry has suffered greatly in the current economic downturn. Ad revenue for local and national spot TV in 2008 was down 2.4% from 2007. Ad revenue for local and national spot TV in the first half of 2009 was down **27%** from the first half of 2008⁴. Several large broadcast station groups are in, or on, the verge of bankruptcy. Upending the definition of local TV markets (DMAs) would further destabilize the industry and, more importantly, would have a significant negative impact on local viewers as choice and robust local programming would inevitably be diminished.
